

Weighing

ARBO Platform Scales are designed to provide high accuracy and reliability on applications in the hardest industrial environments.

The modular designed platform scales can be used on their own as a weighing equipment, or combined with our volumetric feeders to create an accurate loss in weight dosing solution.

Custom designed models for the special application are also available.

Table platform scales

PW Series

Industrial platform scales

PWS Series

Functional enhancement

PWS Series

Features

ARBO platform scales of the PW series are designed for bench or table top applications requiring high accuracy and reliability

The simple and robust three part design of those weighing platforms scales allow easy setup operation without complicated mechanical adjustments and are almost maintenance free

Different sizes of platforms in two geometrical shapes are available

Height and planarity of the platform are adjustable through four threaded legs featuring a spheric hinged foot with rubber coated surface for better adhesion on the surface

Features

ARBO platform scales of the PWS series are designed to provide high accuracy and reliability on applications in the hardest industrial environments

The sturdy design and modular concept of those weighing platforms, allows an easy setup of complex applications requiring integration of weight acquisition unit

Different sizes of platforms in two geometrical shapes are available

Planarity of the platform is adjustable through four shock absorbers provided with threads for safe fixing in final mounting position

Damages to the weight sensor are prevented with an internal adjustable overload protection mechanism

Features

The PWS series have a wide range of functional enhancement capabilities, such as the possibility to mount carrying handles for easy transportation and connection of various types of mounting brackets for electrical junction boxes

For gravimetric dosing applications the dosing equipment can also be provided with local servicing switches

Nearly maintenance free

Explosion proof model are also available

Applicable fields and materials examples

powder, flour, cereal, grains, nuts, seeds, dried fruits, food flavoring, seasoning, frozen food, pet food

pellets, fiberglass, fiber coloring, coating processing materials, resins and additives

detergent components mixture, fertilizer, neutralization additives

raw materials for vitamins and coating tablets
